

CERALOOP™ CHANNEL FURNACE LININGS

CeraLoop Channel Induction Furnace Linings: Fully Fired, Non-Wetting Ceramic Linings for Your Furnace

Enhance the performance of your channel induction furnace and inductor lining system with Blasch's CeraLoop, exclusively distributed by Allied Mineral Products.

Installation is fast and easy and there is no burnout or melt out furnace conditioning required. Simply vibrate or cast the refractory around the ceramic lining custom made for your furnace, allowing you to install in one shift.

Features

- Non-wetting, erosion resistant layer between molten metal and back up refractory
- Customizable
- Allows refractory to be cast or vibrated around the ceramic lining
- Composed of pre-fired dense and non-wetting Blasch materials
- Ideal for zinc, galvanized alloys, brass & bronze

Benefits

- Fast, easy, worry-free installation
- No burn-out or melt out required
- Flexibility on start up
- Faster heat up
- Allied product back up after loop wears away; helps sinter refractories and form a quality hot face
- Pre-fired hot face reduces saturation during start up and sintering
- Start up furnace on any alloy
- Improved consistency heat after heat

Exclusively Distributed by Allied Mineral Products Inc
